

Abstract

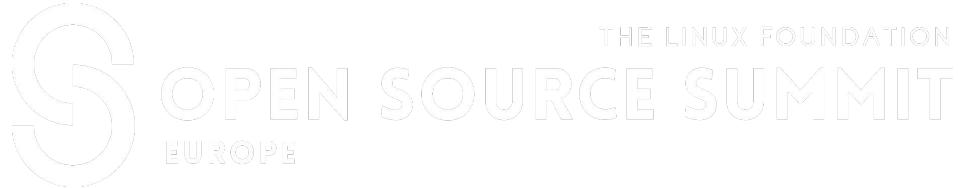

In an era of geopolitical shifts, countries seek technological independence, with open source as a key strategy. While US/European developer density is well-known, their interconnections with China's ecosystem remain under explored. This talk aims at providing an overview based on quantitative data of the evolution of the European and Chinese ecosystems. And give indicators of commonalities across both industries through potentially shared interests.

According to 2024 global open source data released by China's OpenAtom Foundation:

- Europe leads with 3M+ active developers (17.8% YoY growth), while China follows with 2.2M+ (24.05% growth).
- Europe dominates mature domains like OS (3.49M annual contributions) and front-end (9.59M), while China excels in emerging fields such as AI (+29.94%) and semiconductors (+121.64%).

This is growing a non-exclusive and possibly complementary ecosystem of body of knowledge, tools, and processes where different parties can take advantage of.

This talk will share some thoughts on possible collaboration pathways including: technical synergies (trusted AI and compliance), policy alignments, and community coordination by lowering the barriers.

Open Source in Europe & China

Digital Sovereignty & Sustained Collaboration

Daniel Izquierdo, CHAOSS Board Member, CEO @Bitergia

Where are we at?

Geopolitical shifts => Technological Independence => Open Source

Tracking the top developer populations on GitHub (2020-2025)

		FIVE-YEAR TREND	2020 TO 2025 DEV COUNT	FIVE-YEAR CAGR*
1	United States	Steady #1	=10.2M to 28M	20.96%
2	India	+1 Spot	=4.5M to 21.9M	34.36%
3	China	-1 Spot	=6.1M to 10.7M	10.83%
4	Brazil	+1 Spot	=1.5M to 6.89M	33.27%
5	United Kingdom	-1 Spot	=1.7M to 4.8M	21.74%
6	Japan	+2 Spots	=1.2M to 4.5M	27.96%
7	Germany	-1 Spot	=1.4M to 4.4M	24.43%
8	Indonesia	+3 Spots	=0.9M to 4.37M	33.23%
9	Russia	-2 Spots	=1.4M to 4.16M	23.14%
10	Canada	-1 Spot	=1.2M to 3.46M	22.18%

The Challenge: GitHub's Geographic Data Distortion

14. What errors, sources of noise, or redundancies are important for dataset users to be aware of?

GitHub activity is assigned to an economy based on the **IP address** of the given developer or organization. Thus, **VPNs and other means of altering or hiding IP addresses** distort the metrics. Economies where developers may be more likely to use such tools will be affected more than others; **thus, international comparisons should note this limitation.**

<https://github.com/github/innovationgraph/blob/main/docs/datasheet.md>

<https://innovationgraph.github.com/global-metrics/git-pushes>

Current challenges

Challenges

- No existing archive for Chinese data sources (e.g., GitCode or Gitee)
- Almost impossible to start from scratch
- VPN hiding IPs
- Only code hosting platforms has access to IP information

Data Strategy

- Lack of accurate data when dealing with IPs
- Timezone and profile analysis

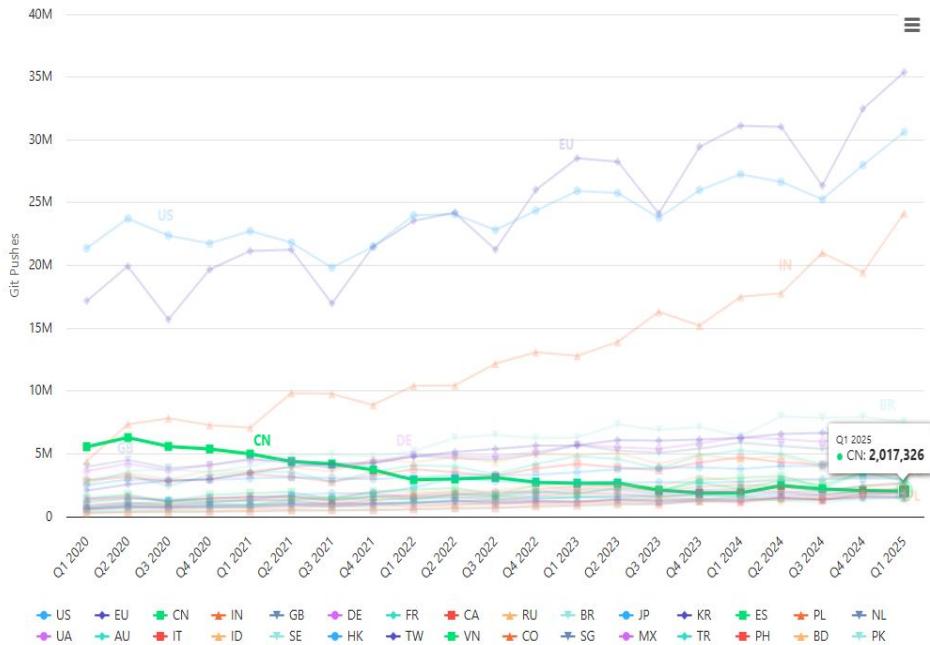

Improvement: OSS-Compass's Enhanced Methodology

Time Zone Verification: OSS-Compass effectively avoids inaccuracies in GitHub's IP-based statistics for high-interference regions (e.g., China) through time zone verification (+8 time zone).

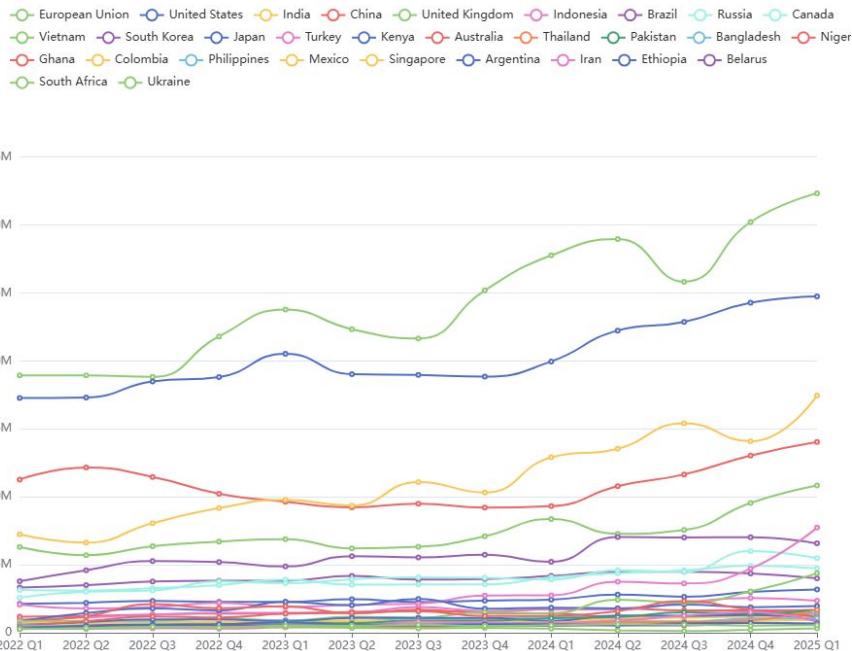

Data Expansion: OSS-Compass also incorporates the Gitee code hosting platform.

China's Code: Across Platforms	2022 Year (Unit: Count)	2023 Year (Unit: Count)	2024 Year (Unit: Count)
Active GitHub Projects	1, 384, 124	1, 511, 342	1, 755, 881
Active Gitee Projects	658, 322	722, 961	1, 109, 724
Active GitHub Developers	650, 746	701, 535	750, 698
Active Gitee Developers	604, 929	1, 086, 702	1, 458, 204

○ Rich Media ○ Industrial Software ○ Smart Vehicle

2022–2024 Development Trends of Code Contributions in Various Technology Fields Within the EU

○ Artificial Intelligence ○ Frontend ○ Operating System ○ Chip ○ Development Framework ○ Database ○ Cloud Native
○ Big Data ○ Programming Language ○ Mobile Application ○ Blockchain ○ Network Communication ○ IoT ○ Robotics
○ Rich Media ○ Industrial Software ○ Smart Vehicle

2022–2024 Development Trends of Code Contributions in Various Technology Fields in China

Initial Conclusions

More deeply embedded open source culture within Europe (higher OSS production rate per capita)

And more mature ecosystem within Europe

China has the potential to massively grow as soon as their ICT employees base keeps growing

Growing faster on incipient markets and edge technologies as AI

Open Discussion: Complementary markets?

Based on previous datasets and the table:

- Expansion of mobile Chinese technology in Europe given the skills and importance of the market, as well as operating systems
- Learning each other from areas such as AI, Blockchain, and operating systems
- Expansion of European technology within Chinese hardware

How much do we want to reinvent the wheel in both parties?

Open Discussion: Challenges

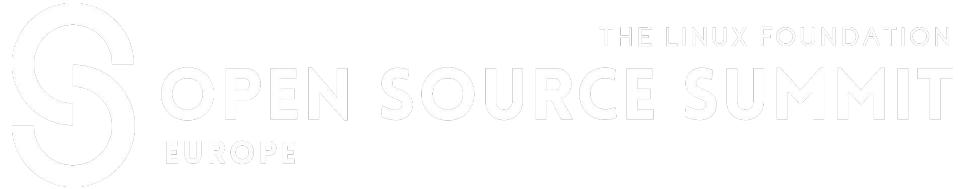

Challenges:

- Trusting each other (open source may help here),
- Political environment,
- Government public funding help,
- Market distortion,
- Export control on crypto (Europe) and AI (China),
- Language barriers and cultural differences

Open Call

If you are interested in producing and understanding the Chinese ecosystem, please contact us.
